

WELCOME TO

# TECHNOVATION N

Week 3 - October 16

**MICHIGAN STATE** UNIVERSITY

# Agenda

- Spotlight 10 - 10:15
- Lesson 2 Continued 10:15 - 10:45
  - Review
  - Variables
  - User Inputs
- Coding challenges 10:45 - 11:15
- Standup 11:15 - 11:30
  - Temperature Check

# Spotlight

## What Most Schools Don't Teach

- Why do you want to learn to code?
- How do you hope to use computer science in the future?

Feedback!

# Review - Week 1

Command	What does it do?
<code>forward(<i>distance</i>)</code>	Moves Tracy forward a specified <i>distance</i>
<code>circle(<i>radius</i>)</code>	Draws a circle with a specified <i>radius</i>
<code>backward(<i>distance</i>)</code>	Moves Tracy backward a specified <i>distance</i>
<code>penup()</code>	Stops Tracy from leaving a trail
<code>pendown()</code>	Has Tracy start drawing a trail
<code>left(<i>num</i>)</code>	Turns Tracy <i>num</i> degrees to the left
<code>right(<i>num</i>)</code>	Turns Tracy <i>num</i> degrees to the right

## Review - Week 2

Command	What does it do?
<code>color("color name")</code>	Changes Tracy's trail color
<code>pensize(number)</code>	Changes Tracy's trail thickness
<code>begin_fill()</code>	Starts tracking closed shapes
<code>end_fill()</code>	Fills & stops tracking closed shapes
<code>setposition(x, y)</code>	Moves Tracy to the input coordinates
<code>speed(number)</code>	Sets how fast Tracy executes commands
<code>name = value</code>	Saves the value in the variable

# Tracy command: Assignment

`name = value`

`radius = 20`  
`circle(radius)`

# More About Variables

A **variable** is like a “box” for a “value” (number or text)

# What's the Deal With Variables?

```
radius = 20
circle(radius)
penup()
setposition(0, -radius)
pendown()
```

**Variables** let us set a value *once*, and then use that same value over and over!

# What's the Deal With Variables?

```
radius = 20
circle(radius)
penup()
setposition(0,-radius)
pendown()
radius = 2*radius
circle(radius)
```

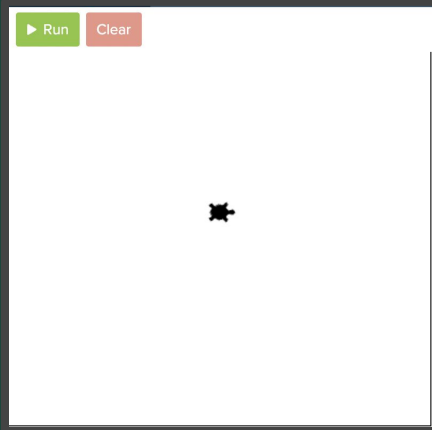

**Variables** let us set a value *once*, and then use that same value over and over!

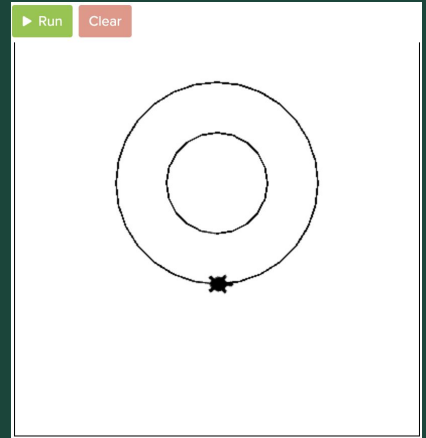

**Variables** can be modified to store different values over time!

# What's the Deal With Variables?

```
radius = 50
circle(radius)
penup()
setposition(0, -radius)
pendown()
radius = 2*radius
circle(radius)
```

**Variables** let us set a value *once*, and then use that same value over and over!

**Variables** can be modified to store different values over time!

**Variables** make it easier to read and modify code!

radius →

100

# Rules for Naming Variables

## A Variable Name:

- Should start with a letter
- Consists of letters, numbers, and underscores ('\_')
- Cannot be a Python “reserved word”  
(e.g., **int**, **float**, **input**, **print**, ...)
- Should be meaningful – for example:

`radius`

`speed`

`hair_color`

# User Input (Text)

**Variables** can also be used to save *user input*, letting the user indicate values on-the-fly while running programs!

Use assignment with the `input("prompt")` function!

```
clr = input("Enter a color: ")  
# if the user types "green"  
color(clr)
```

clr →  
"green"

```
clr = input("Enter a color: ")  
# if the user types "blue"  
color(clr)
```

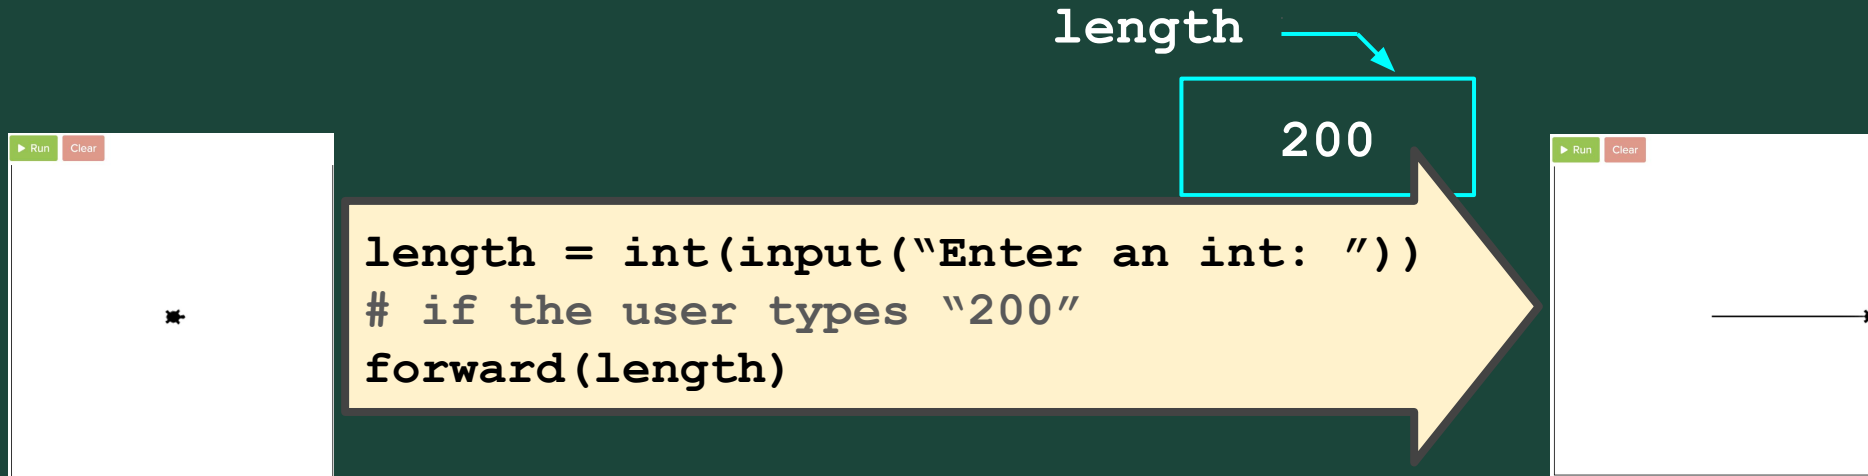

clr →  
"blue"

# User Input (Numbers)

The user inputs a “string”, or sequence of characters.

To use a user input as a number, you have to tell Python to convert it to an “int” or a “float” – use `int(...)` or `float(...)`

Command	What does it do?
<code>color("color name")</code>	Changes Tracy's trail color
<code>pensize(number)</code>	Changes Tracy's trail thickness
<code>begin_fill()</code>	Starts tracking closed shapes
<code>end_fill()</code>	Fills & stops tracking closed shapes
<code>setposition(x, y)</code>	Moves Tracy to the input coordinates
<code>speed(number)</code>	Sets how fast Tracy executes commands
<code>name = value</code>	Saves the value in the variable
<code>input("prompt")</code>	Prints prompt and waits for user input
<code>int(...), float(...)</code>	Converts a value to a number ( <b>int</b> or <b>float</b> )

# Standup

- What is a challenge you faced today?
- What is something you were successful with?
- What do you want to improve on for next week?
- What are you most excited to learn?

# Attendance and Temperature Check

## Temperature Check
